

Confusion matrix for the CIFAR-10 dataset. The x-axis is labeled 'Predicted class' and the y-axis is labeled 'Actual class'. The matrix shows the distribution of predicted vs. actual classes, with a strong diagonal indicating high accuracy.

Confusion matrix for the CIFAR-10 dataset using a ResNet-18 model. The matrix shows the relationship between True class (rows) and Predicted class (columns). The color scale represents the Row-normalized frequency, ranging from 0.0 (light blue) to 1.0 (dark blue). The diagonal elements are dark blue, indicating high accuracy for each class. Off-diagonal elements show misclassification frequencies.
